This page is about me and the things I'm currently tinkering with.

As a result this will mostly be about PLC programming, various automation project and maintaining SRCDS based servers with sourcemod installations.

My primary PLC focus area is Schneider Electric PL7 Pro based PLCs but also the Unity based PLCs and to some extend SoMachine based PLCs, which is basically just a custom version of Codesys 3.5, and finally Codesys 2.3 and Codesys 3.5 itself on various controllers.

To name a few: [IFM](#), [Wachendorff](#), [InterControl](#) and also [The Raspberry Pi](#) with a [Codesys runtime](#) for small non-critical projects

In my spare time I host CS:GO servers at [Uber1337.dk gaming community](#) on a CentOS Linux operating system.
